

1. PROJECT & TEAM INFORMATION

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models
- **Team ID:** SWTID-2026-7486
- **Team Leader:** Diwan Oli M

2. TARGET AUDIENCE & PERSONA IDENTIFICATION

- **Target Audience:** Independent authors, creative students, teachers, and casual storytellers.
- **User Persona:** "Storyteller Arun" - A 22-year-old literature student and aspiring writer. He has brilliant ideas for fantasy stories but zero graphic design skills. He wishes to publish short comic strips online but is hindered by the complexity of design software.

3. EMPATHY MAP BREAKDOWN

What the User SAYS:

- "I want my fictional characters to look exactly how I imagine them in my head."
- "Hiring a digital artist for just a 5-panel story is way out of my budget."
- "I don't have the time to learn Adobe Photoshop or Illustrator from scratch."

What the User THINKS:

- "Can an AI tool actually understand the sequence of my story?"
- "I need a tool that handles both the writing formatting and the drawing."
- "It would be amazing to download my story directly as a PDF to share with my friends."

What the User DOES:

- Types out story scripts in MS Word or Notepad.

- Uses generic AI image generators but gets frustrated trying to stitch the random images together.
- Often abandons creative projects because of the visualization hurdle.

What the User FEELS:

- **Overwhelmed:** By the technical learning curve of traditional graphic design tools.
- **Restricted:** Because his creativity is limited to text only.
- **Optimistic:** About the potential of AI to automate the heavy lifting of illustration.

4. PAINS AND GAINS

- **Pains:** The high financial cost of commissioning art, the technical difficulty of formatting text and images together, and the lack of narrative consistency in standard AI art generators.
- **Gains:** Instant transformation of ideas into visuals, zero requirement for artistic skills, and a ready-to-share PDF output.
