

1. PROJECT OVERVIEW

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models

2. FEATURE HIGHLIGHTS IN DEMONSTRATION :

During the project demonstration, the core functionalities that resolve the "Graphic Execution Gap" will be sequentially showcased. The demonstration validates that all proposed features have been successfully coded and integrated.

3. PROPOSED FEATURES TO BE DEMONSTRATED

- **Dynamic Prompt Processing:** Showcasing how the application's frontend seamlessly captures complex user inputs without requiring any prior prompt-engineering knowledge.
- **Automated Narrative Structuring (Gemini Flash):** Demonstrating the backend's ability to instantly slice a singular story idea into a structured, 5-panel logical sequence.
- **Rich Dialogue Generation (Gemini Pro):** Exhibiting the system's capacity to write engaging, contextual character dialogues and scene descriptions.
- **Autonomous Visual Rendering (Stable Diffusion):** Highlighting the integration with Hugging Face to generate high-quality comic illustrations that match the AI-written script.
- **One-Click Document Export (FPDF):** The final, most crucial feature demonstration—proving that the compiled images and text are algorithmically aligned and instantly downloadable as a multi-page PDF document.
